Att: Christopher Laudando (President, Laudando & Associates LLC)

Dear Mr Laudando

L&Aser Laser Crop Weeding System
Promotion and Use in Australia by Laudando & Associates LLC
Infringement of Australian Patent Rights of Carbon Autonomous Robotic Systems Inc.
Our Ref: L0094454

1. As we understand you are aware, we act for Carbon Autonomous Robotic Systems Inc. (**Carbon**).

2. We refer to our cease-and-desist letter dated 9 July 2026 (**C&D Letter**), sent to you and Mr Braden Hellmuth of Row Ready Pty Ltd (**RR**) by email and by courier (in lieu of registered post). Although we have received no direct response to our C&D Letter from L&A, we observe that Mr Laudando and L&A have since made various online statements that make clear L&A is aware of its contents. We refer, in particular, to the following LinkedIn posts, which are reproduced in the **Annexure F** to this letter:

   (a) Mr Laudando's LinkedIn post dated ~10 July 2026 tagging the LinkedIn accounts of L&A, RR, Carbon and Spruson & Ferguson (https://www.linkedin.com/posts/laudando_agtech-laser-cropprotection-activity-7481112463443222528-lZ5k?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

   (b) L&A's LinkedIn post dated ~13 July 2026 tagging the LinkedIn accounts of RR and Mr Daniel Hodge of Peninsula Fresh Organics and including a video of an L&Aser System apparently in operation at Peninsula Fresh Organics' farm in Victoria (https://www.linkedin.com/posts/laudando_agtech-laser-cropprotection-activity-7481111176701988864-aLP6?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

   (c) Mr Laudando's re-post of a LinkedIn post from the account of L&A Canada, Inc dated ~14 July 2026 (https://www.linkedin.com/posts/l-a-canada-inc_agtech-licensing-dutch-activity-7482584091125510144-Uj6w?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

Spruson & Ferguson Lawyers Pty Limited ABN 50 169 430 568 | Liability limited by a scheme approved under Professional Standard Legislation. Spruson & Ferguson Lawyers Pty Limited is affiliated with Spruson & Ferguson companies in the Asia-Pacific region, including Spruson & Ferguson Pty Limited.

Each Spruson & Ferguson company is a separate legal entity and a member of the IPH Limited group, an 'ownership group' under the *Code of Conduct for Trans-Tasman Patent and Trade Mark Attorneys 2018* (see **https://www.spruson.com/about-us**)

spruson.com

(d) Mr Laudando's LinkedIn post dated ~14 July 2026 tagging the LinkedIn accounts of L&A and Carbon (https://www.linkedin.com/posts/laudando_agtech-australia-competition-activity-7482482133828272128-R_z-?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

(e) Mr Laudando's LinkedIn post dated ~15 July 2026 tagging the LinkedIn account of Carbon (https://www.linkedin.com/posts/laudando_laudando-associates-granted-foundational-activity-7482907344172109824-zMpc?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

(f) Mr Laudando's LinkedIn post dated ~23 July 2026 (https://www.linkedin.com/posts/laudando_agtech-agriculture-technology-ugcPost-7486047848837324800-uYg6/?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

(g) Mr Laudando's LinkedIn post dated ~25 July 2026 tagging the LinkedIn account of Carbon (https://www.linkedin.com/posts/laudando_agtech-laser-cropprotection-share-7486256013583495168-0INV/?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U);

(h) Mr Laudando's LinkedIn post dated ~26 July 2026 (https://www.linkedin.com/posts/laudando_agtech-laser-cropprotection-ugcPost-7486865564708065281-Ck3n/?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U); and

(i) Mr Laudando's LinkedIn post dated ~27 July 2026 (https://www.linkedin.com/posts/laudando_agtech-wallstreet-farmersfirst-share-7487266695540256769-R7EF/?utm_source=share&utm_medium=member_desktop&rcm=ACoAAATX8_YBlQy4_DbmEDiC2zasDZcHSJWsA-U).

3. The statements made by Mr Laudando and L&A on LinkedIn since 9 July 2026 make clear that L&A is aware of the contents of the C&D Letter and has elected to respond publicly rather than privately. Those statements indicate that:

(a) L&A is "*pausing new commercial availability of L&Aser in Australia*" (post dated ~14 July 2026, paragraph 2(d) above). Mr Laudando states that he "*will not ask individual Australian farms to become test cases in a global patent dispute*" and that L&A will not "*continue encouraging commercial adoption while growers believe they may personally bear the legal consequences of preserving competition*" (ibid).

(b) L&A intends to "*redirect [its] primary commercial & research efforts to the Netherlands and the broader European horticulture ecosystem*" (post dated ~14 July 2026, paragraph 2(d) above), to be serviced through L&A Canada, Inc. Mr Laudando further states that L&A has "*begun shifting [its] focus to the Netherlands and Europe*" (post dated ~15 July 2026, paragraph 2(e) above). L&A Canada, Inc has separately announced it will be "v*isiting The Netherlands later this month to begin exploring technology licensing opportunities that can accelerate the global adoption of L&Aser outside of the United States and Australia*" (post dated ~14 July 2026, paragraph 2(c) above).

(c) L&Aser System "*commercial availability in Australia can return*" only when certain conditions are met that Mr Laudando considers do not presently exist, namely "*when Australian growers and research partners have a credible, industry-supported pathway to evaluate and deploy differentiated laser crop protection systems without being subject to unacceptable litigation risk*" (post dated ~14 July 2026, paragraph 2(d) above).

(d) Mr Laudando acknowledges that "*multiple Australian growers have told [him] they're concerned continued cooperation with Laudando & Associates LLC could expose their farms to legal action from Carbon Robotics*" and that this "*fear is real*" and "*already affecting grower behavior*" (post dated ~14 July 2026, paragraph 2(d) above).

(e) Mr Laudando has no intention of providing the undertakings requested in Annexure E of the C&D Letter, as Mr Laudando responded to a comment on his ~10 July 2026 post to the effect that he expected to "get served".

(f) RR has unequivocally terminated all licensing and distribution agreements and arrangements between it and L&A with respect to L&Aser System, L&Aser Modules and AgCeption Software (post dated ~23 July 2026, paragraph 2(f) above).

(g) Mr Laudando and L&A now emphasise in public statements that the L&Aser System is no longer available in Australia (posts dated ~14, ~15, ~23, ~25, ~26 and ~27 July 2026, paragraphs 2(d)-2(i) above).

4. We note Mr Laudando's reference to "*existing research relationships*" being "*reviewed separately*" (post dated ~14 July 2026, paragraph 2(d) above). Carbon understands from L&A's earlier public statements (referenced in detail in the C&D Letter) that L&Aser Systems were supplied to the farms of Peninsula Fresh Organics (Mornington Peninsula, Victoria) and Busch Organics (East Gippsland, Victoria) for use in their commercial agricultural operations. Carbon understands from Mr Laudando's public statements that those farms have not purchased or do not yet own L&Aser Systems and that the equipment was supplied on an interim or trial basis. It is apparent that the L&Aser Systems were used in commercial farming operations, including as depicted in L&A's own promotional videos and LinkedIn posts. Consequently, Mr Laudando's and L&A's characterisation of any such use as for the purposes of "research" only, and therefore somehow immune from infringement of Carbon's Australian patents, is not accepted by Carbon.

5. Carbon acknowledges the public statements made by Mr Laudando on behalf of L&A set out above, which plainly were intended to be seen by Carbon and by all existing and potential purchasers and users of the L&Aser System. Carbon gives appropriate weight to those statements and does not disregard them. However, those statements do not provide a sufficiently clear or reliable basis for Carbon to proceed on the footing that the threatened infringing conduct will not occur in Australia. In particular:

   (a) the statements are public announcements made on social media, not formally directed to Carbon or its lawyers, and do not constitute a formal or binding response to the C&D Letter;

   (b) the statements do not address or respond to the specific matters raised in the C&D Letter, including the detailed allegations of patent infringement and the undertakings sought (and corresponding releases offered); and

   (c) the statements are framed in terms that leave room for qualification, re-characterisation or later change (e.g., Mr Laudando refers to a "pause" on "new commercial availability" and to "existing research relationships" being "reviewed separately", which does not amount to an unequivocal commitment to cease all exploitation).

6. In these circumstances, Carbon therefore requires L&A to provide, by no later than **4.00pm Melbourne time on Friday, 7 August 2026**:

   (a) the undertakings in **Annexure G** to this letter, duly executed by L&A (please note that Annexure G reproduces the undertakings previously sought in Annexure E to the C&D Letter, adapted to be between only Carbon and L&A and further amending 5(c)). For the avoidance of doubt, the releases from liability for past infringements offered by Carbon in Annexure G to this letter remain available to L&A, but only on the condition that L&A provides and complies with those requested undertakings. Those releases will not be available if L&A fails to provide the undertakings by the deadline stipulated above; or

   (b) at a minimum (and noting it would not provide L&A with the benefit of any releases from liability, but would avoid the commencement of court proceedings by Carbon in Australia), direct written confirmation from L&A to us by letter or email, and not merely a public social media post, that:

      (i) there is no present intention on the part of L&A, alone or together with or through any other party, to pursue the infringing conduct in Australia identified in the C&D Letter (including, without limitation, promoting, manufacturing, importing, offering for sale, supplying, using or otherwise exploiting the L&Aser System or L&Aser Modules in Australia or by exporting the L&Aser System or L&Aser Modules from Australia);

      (ii) L&A undertakes that, by no later than 31 August 2026, it will destroy all L&Aser Modules in Australia that it owns or possesses, save that L&A may retain any Cortex HMI used with those L&Aser Modules to create an L&Aser System, and will provide Carbon with written confirmation of that destruction;

      (iii) L&A undertakes to provide Carbon with not less than 30 days' prior written notice if the position of L&A changes and it forms an intention to resume any exploitation of the L&Aser System or L&Aser Modules in Australia or to export any L&Aser System or L&Aser Module from Australia; and

      (iv) L&A undertakes that it will not take any point as to delay on the part of Carbon in commencing proceedings (for the purposes of any application by Carbon for a preliminary (interlocutory) injunction) arising from Carbon not commencing proceedings immediately in reliance on the public statements or any confirmation given under this paragraph.

7. The public statements by Mr Laudando and L&A, while encouraging, are not a substitute for the direct, binding undertakings sought in the C&D Letter. Carbon has undertaken significant preparatory work and is ready to commence patent infringement proceedings in the Federal Court of Australia immediately. Absent an adequate response by the deadline stipulated above, Carbon reserves the right to commence proceedings against L&A without further notice, seeking both interlocutory and permanent injunctive relief, declarations of infringement, damages or an account of profits, delivery-up or destruction of L&Aser Systems and L&Aser Modules within Australia, and legal costs, as foreshadowed in the C&D Letter.

8. For the avoidance of doubt, Carbon reiterates the matters set out in the C&D Letter regarding its patent rights. As detailed in paragraphs 15 to 28 and Annexure D of the C&D Letter, the L&Aser System possesses all features of each of claims 1 to 5 of Carbon's certified Australian innovation patent no. 2026100003 (**AU'003 Patent**) and each of claims 1 to 8, 10, 16 and 24 to 26 of Carbon's Australian standard patent no. 2022380472 (**AU'472 Patent**). Should it become necessary, Carbon will seek a permanent injunction restraining L&A from exploiting the L&Aser System or L&Aser Modules in Australia until the expiry of the AU'472 Patent on 1 November 2042 or, alternatively, at least until the expiry of the AU'003 Patent on 16 September 2028, together with

an account of profits or compensatory and additional damages, delivery-up or destruction, and legal costs.

9. Carbon further reserves its right to rely upon this letter, the C&D Letter, the entirety of the correspondence between the parties and the public statements made by Mr Laudando and L&A on LinkedIn and elsewhere, in support of any application for costs, should proceedings become necessary and L&A subsequently abandons the threatened course of conduct, provides the requested undertakings only after proceedings have been commenced, or otherwise causes Carbon to incur costs that would have been avoided had L&A provided a timely and adequate response to the C&D Letter and this letter. Carbon puts L&A on notice that the costs of commencing proceedings and progressing through the early stages of those proceedings, which could have been avoided by the provision of timely undertakings, may be the subject of a specific application for indemnity costs.

10. Carbon continues to reserve its rights and interests in their entirety.

Yours faithfully

Spruson & Ferguson Lawyers Pty Ltd

Carbon Robotics has officially launched their sham litigation world tour to commandeer L&A's IP and de facto consolidate Australian horticulture with a monopoly most Aussie growers can't afford or even use. But it gets worse...

If I sign Spruson & Ferguson's Annexure E, then Australian broadacre farmers will be bound to chemical herbicides for another generation, during which time herbicide resistance will begin to threaten Australian ag exports. Not if, when.

But no worries, mate. She'll be right. A future politician will surely have the solution.

If John Deere, Bayer, Corteva Agriscience, AGCO Corporation, CNH, or any lesser incumbent still wants to pretend this is a normal patent dispute, DM me for a copy of the confession letter their lawyer just sent me. I'll warn you, it carries on like a porkchop.

To avoid more farmer-harming sham litigation Down Under, Laudando & Associates LLC and Row Ready must:

1. Cancel orders with Australian growers who've been requesting access to the well-differentiated L&Aser since FIRA 2024.

2. Destroy Busch Organics and Peninsula Fresh Organics machines, all L&Aser Modules, L&Aser Cubes, AgCeption Cortex HMI's, and the L&Aser spare parts inventory we shipped to Australia to escape sham litigation in the United States.

3. Hand over farm data belonging to Busch Organics, Peninsula Fresh Organics, Koala Farms, Taranto Farms, Covino Farms, Greensill Farming, Mulgowie Farming Company, as well as data & insights belonging to many dozens of Australian growers we've met at the Department of Primary Industries (Queensland)'s Gatton AgTech Showcase 2025 and AUSVEG's VicVID 2026.

4. Hand over L&A and Row Ready's BOM, COGS, pricing, and supplier information, even if it violates existing non-disclosure agreements, presumably for LaserWeeder G3?

5. Withdraw our lawful patent challenges to Carbon's overly broad Australian patents and flee the country to begin AgTech Exile 2.0 with L&A Canada, Inc. (from scratch since we have to *destroy* the world's most exciting AgTech inventory before we leave).

This is not competition.

It's global market foreclosure.

But you guessed it, it gets worse...

Carbon Robotics is making this demand after using L&A's own U.S. patent disclosures to attain an Australian patent for what we disclosed first.

Read that again.

NVIDIA-funded Carbon Robotics is building their case off L&A's dated marketing materials *and L&A's own U.S. publication.*

Here is my question for incumbents:

Do you want to continue playing ostrich while Carbon uses venture capital to build your global-innovation-stifling moat, or is now the time to support photonic platform technology that can scale globally to address herbicide resistance in corn, soybeans, wheat, cotton, canola, etc.?

If the former is your plan, don't be surprised when the future routes around all of you, especially Wall Street.

Dear Mr Laudando and Mr Hellmuth

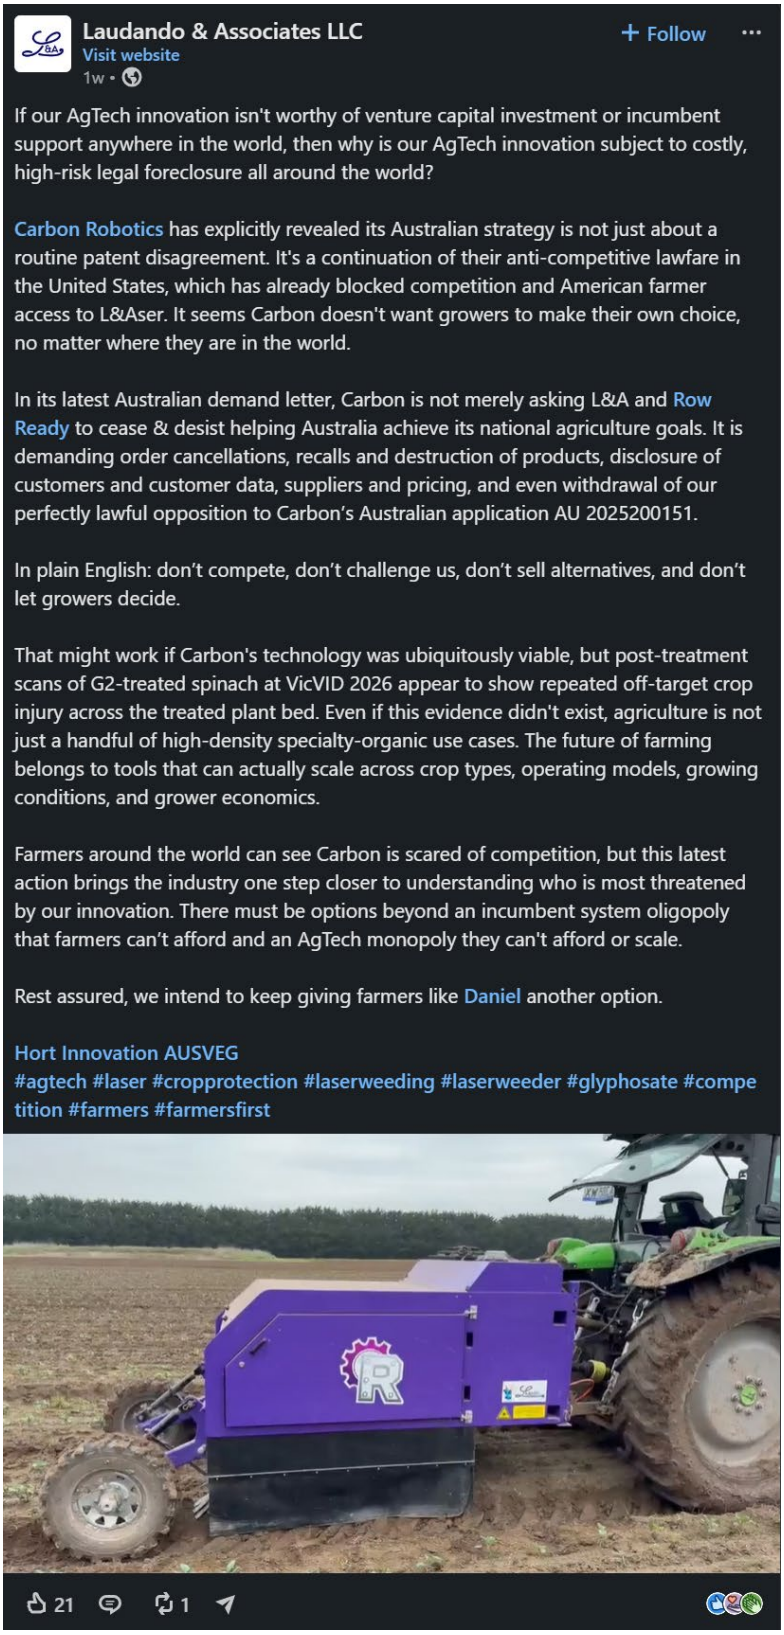

L&Aser Laser Crop Weeding System
Promotion and Use in Australia by Laudando & Associates LLC and Row Ready Pty Ltd
Infringement of Australian Patent Rights of Carbon Autonomous Robotic Systems Inc.
Our Ref: L0094454

1. We act for Carbon Autonomous Robotic Systems Inc. (**Carbon**).
2. Carbon is the patentee of certified Australian innovation patent no. 2026100003 entitled "Autonomous laser weed eradication" (**AU'003 Patent**) and Australian standard patent no. 2022380472 entitled "High intensity illumination systems and methods of use thereof" (**AU'472 Patent**). Each of the AU'003 Patent and AU'472 Patent (collectively, the **Patents**) relates to laser weeding systems, as outlined below. The Patents are relevant to Carbon's innovative and commercially successful laser weeding technology and products, promoted and supplied in Australia and other countries under the brand and trade mark **LaserWeeder™**: https://carbonrobotics.com/laserweeder and https://carbonrobotics.com/laserweeder-g2.
3. Carbon is aware that your companies, Laudando & Associates LLC (**L&A**) and Row Ready Pty Ltd (**RR**), are, directly and/or in collaboration with one another, promoting, manufacturing, importing, offering for sale, supplying, using or otherwise exploiting in Australia, a laser weeding system under the name "L&Aser" (**L&Aser System**). The L&Aser System comprises:

Carbon Robotics will soon learn that Australian farmers don't like US style lawfare. It will hurt sales.
This type of anti competitive behaviour should be reviewed by the ACCC
I would also be very disappointed to see any support and advocacy coming for Carbon Robotics from Hort Innovation
Australian Farmers need a level playing field for innovation.

If our AgTech innovation isn't worthy of venture capital investment or incumbent support anywhere in the world, then why is our AgTech innovation subject to costly, high-risk legal foreclosure all around the world?

Carbon Robotics has explicitly revealed its Australian strategy is not just about a routine patent disagreement. It's a continuation of their anti-competitive lawfare in the United States, which has already blocked competition and American farmer access to L&Aser. It seems Carbon doesn't want growers to make their own choice, no matter where they are in the world.

In its latest Australian demand letter, Carbon is not merely asking L&A and Row Ready to cease & desist helping Australia achieve its national agriculture goals. It is demanding order cancellations, recalls and destruction of products, disclosure of customers and customer data, suppliers and pricing, and even withdrawal of our perfectly lawful opposition to Carbon's Australian application AU 2025200151.

In plain English: don't compete, don't challenge us, don't sell alternatives, and don't let growers decide.

That might work if Carbon's technology was ubiquitously viable, but post-treatment scans of G2-treated spinach at VicVID 2026 appear to show repeated off-target crop injury across the treated plant bed. Even if this evidence didn't exist, agriculture is not just a handful of high-density specialty-organic use cases. The future of farming belongs to tools that can actually scale across crop types, operating models, growing conditions, and grower economics.

Farmers around the world can see Carbon is scared of competition, but this latest action brings the industry one step closer to understanding who is most threatened by our innovation. There must be options beyond an incumbent system oligopoly that farmers can't afford and an AgTech monopoly they can't afford or scale.

Rest assured, we intend to keep giving farmers like Daniel another option.

Australia deserves competition, but its growers shouldn't have to litigate for it.

Over the past few days, multiple Australian growers have told me they're concerned continued cooperation with Laudando & Associates LLC could expose their farms to legal action from Carbon Robotics.

Whether that risk proves to be justified isn't the point. The fear is real, and it's already affecting grower behavior. ***I will not ask*** individual Australian farms to become test cases in a global patent dispute simply because they want access to a differentiated crop protection technology.

Accordingly, L&A is pausing new commercial availability of L&Aser in Australia.

Existing research relationships will be reviewed separately, and our commitment to lawful independent research remains unchanged. But we will not continue encouraging commercial adoption while growers believe they may personally bear the legal consequences of preserving competition.

This is not a decision I take lightly.

Rationally, it's the correct move. Emotionally, it feels like a forced betrayal.

Australian growers have been L&Aser's strongest advocates. They have supplied field access, agronomic knowledge, engineering feedback, and an unusually clear view of what practical laser crop protection must become.

But access to competition cannot depend on the courage or financial capacity of individual farms. The responsibility of protecting farm input competition in Australia doesn't fall on them, and it doesn't fall on a single bootstrapped American innovator living in AgTech exile either. This responsibility now belongs to the broader Australian horticulture industry.

Australia has stated ambitions to become a globally significant center for horticultural technology. Achieving that ambition requires more than attracting international AgTech demos Down Under. It requires more than celebrating the idea of innovation through relationships with foreign organizations. It requires an institutional environment in which competing technologies can be researched, tested, challenged, improved, and commercialized without Australian growers becoming collateral damage.

For the immediate future, we will redirect our primary commercial & research efforts to the Netherlands and the broader European horticulture ecosystem, which we intend to service through L&A Canada, Inc.

L&Aser commercial availability in Australia can return when Australian growers and research partners have a credible, industry-supported pathway to evaluate and deploy differentiated laser crop protection systems without being subject to unacceptable litigation risk from American “alpha dog” AgTech startups (https://lnkd.in/gHCvcaH9).

The question that needs answering is whether Australian horticulture will preserve access to competition, or if it'll accept the anticompetitive market foreclosure precedent set in the United States.

Hi Christopher

[redacted] shared you contact with me im looking at different options to control weeds in garlic in Victoria Australia

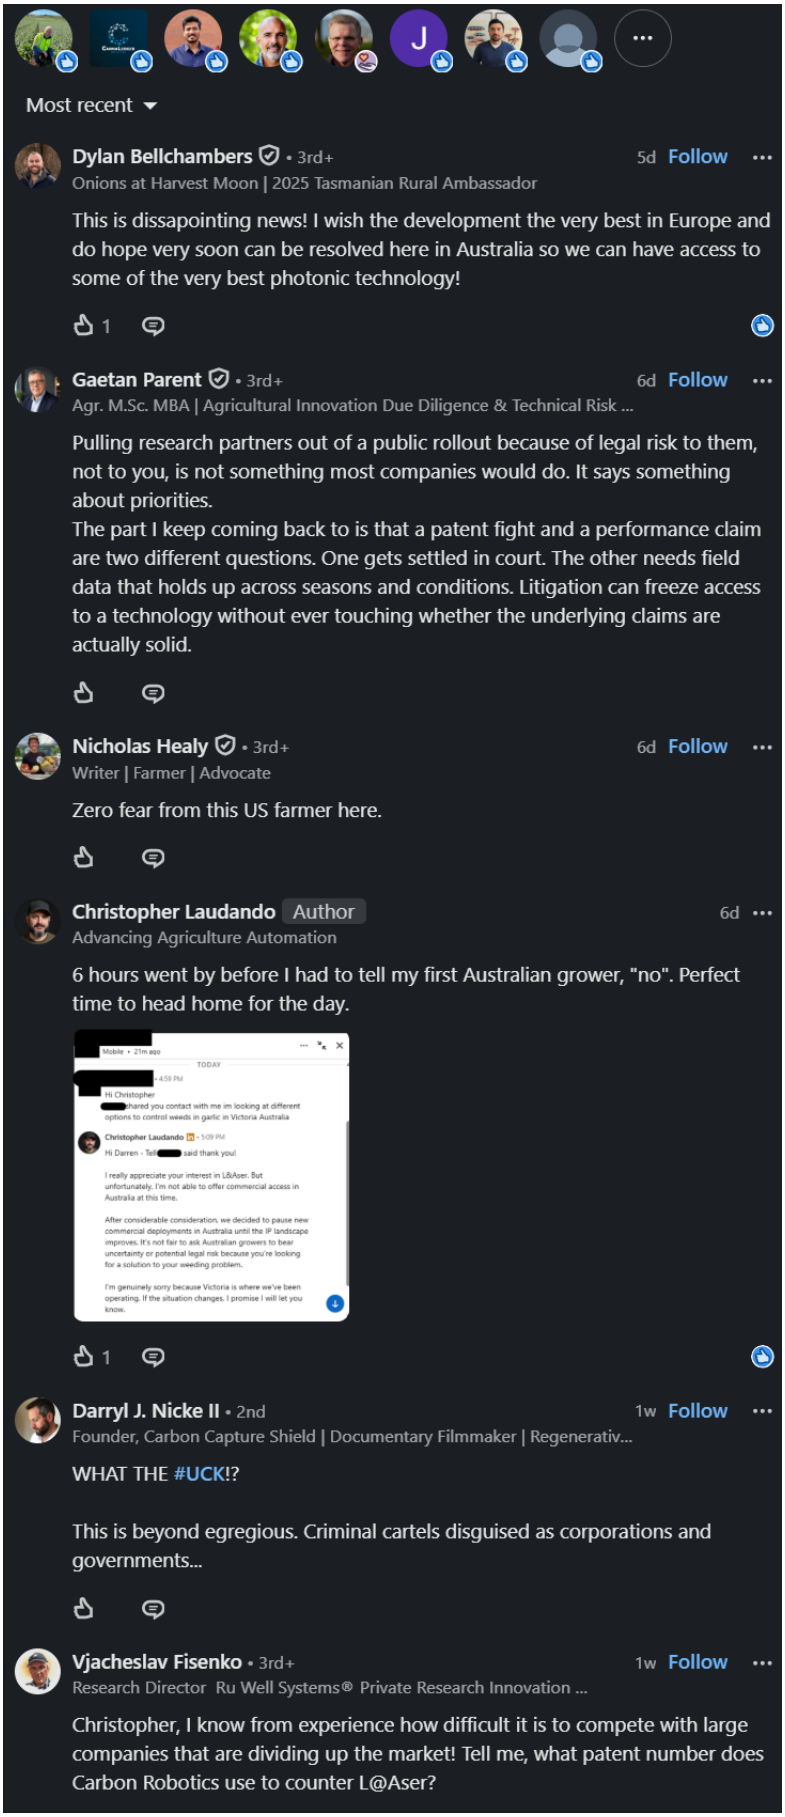

Christopher Laudando • 5:09 PM

Hi Darren - Tell[redacted] said thank you!

I really appreciate your interest in L&Aser. But unfortunately, I'm not able to offer commercial access in Australia at this time.

After considerable consideration, we decided to pause new commercial deployments in Australia until the IP landscape improves. It's not fair to ask Australian growers to bear uncertainty or potential legal risk because you're looking for a solution to your weeding problem.

I'm genuinely sorry because Victoria is where we've been operating. If the situation changes, I promise I will let you know.

Pulling research partners out of a public rollout because of legal risk to them, not to you, is not something most companies would do. It says something about priorities.
The part I keep coming back to is that a patent fight and a performance claim are two different questions. One gets settled in court. The other needs field data that holds up across seasons and conditions. Litigation can freeze access to a technology without ever touching whether the underlying claims are actually solid.

Christopher, I know from experience how difficult it is to compete with large companies that are dividing up the market! Tell me, what patent number does Carbon Robotics use to counter L@Aser?

Today the USPTO granted Laudando & Associates LLC U.S. Patent No. 12,677,822 B2 - *Cultivating Methods and Apparatuses.*

It's an awkward day for retired neophyte laser weeding "experts" and "knockoff" product narratives.

To be clear: our U.S. patent grant *does not* make Carbon Robotics' sham lawsuit disappear. The patent process and federal litigation are separate tracks. But it does create a strange moment in history for American agriculture:

The U.S. government says L&Aser™ is a novel & well-differentiated invention, but the U.S. government says American farmers can't have access to the novelty of our well-differentiated American invention.

American farmers deserve to know why, especially without adjudication on the merits of NVIDIA-funded accusation.

Meanwhile, Australian growers are concerned about similar sham litigation exposure Down Under simply because they want to solve their problem with our novel & well-differentiated invention - not Carbon's minimally viable integration. Since I'm not willing to ask individual Australian farms to carry that risk, we've paused new commercial availability in Australia and have begun shifting our focus to the Netherlands and Europe.

But Australian farmers also deserve to know why farm input competition isn't allowed in their country.

And though I fully expect our shifted focus to bring additional threats of sham litigation in European jurisdictions, I can't control the desperation of our competitor. I can only focus on our objective, which is much greater than merely replacing herbicides with lasers. Right now, our objective is to accelerate an exciting new research frontier for crop protection using the L&Aser™ platform and AgCeption® phenotyping tools.

I'm focused on better physics, better biological outcomes, and better economics for farmers, big & small.

I'm worried about advancing agriculture.

I'll let other companies worry about holding it back.

Congrats Christopher Laudando! Very well deserved for your efforts!

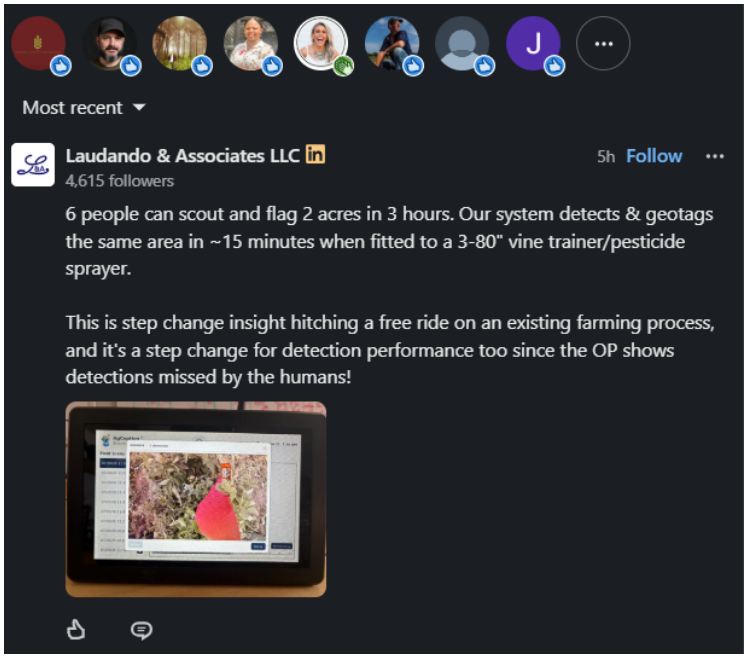

If Carbon wants to sue me or my tiny farm for trying to stay in business, I would welcome the opportunity to defend American agriculture against techno-kleptocracy.

Elijah why? They just lost access to everything. At least American farmers still have access to AgCeption.

Attention Laudando & Associates LLC
Dear Chris,
On behalf of Row Ready Pty Ltd, an Australian proprietary limited company, I consider that there is no viable or enforceable licence or distribution agreement in place between our respective companies with respect to the AgCeption products, L&Aser modules or systems. Should you consider that there is presently an enforceable contract in place, please accept this as valid and lawful termination of any such agreement.
Kind Regards,
Braden Hellmuth

Christopher Laudando my apologies to you and the Australian farmers, I missed that development. Words can't describe how terrible it is that growers are being denied frontier-grade production tools just because the ones with money and legal might don't think they can compete on merit alone.

Before continuing conversations with prospective collaborators in the Netherlands, I'm compelled to state the following:

There are false claims circulating in multiple countries regarding my background, including claims that I previously worked for Carbon Robotics, that the patented L&Aser originated from stolen Carbon Robotics technology, and that Tanimura & Antle is materially connected to L&A.

All of those claims are false. Our contributions to humanity belong to me and the Associates, no one else.

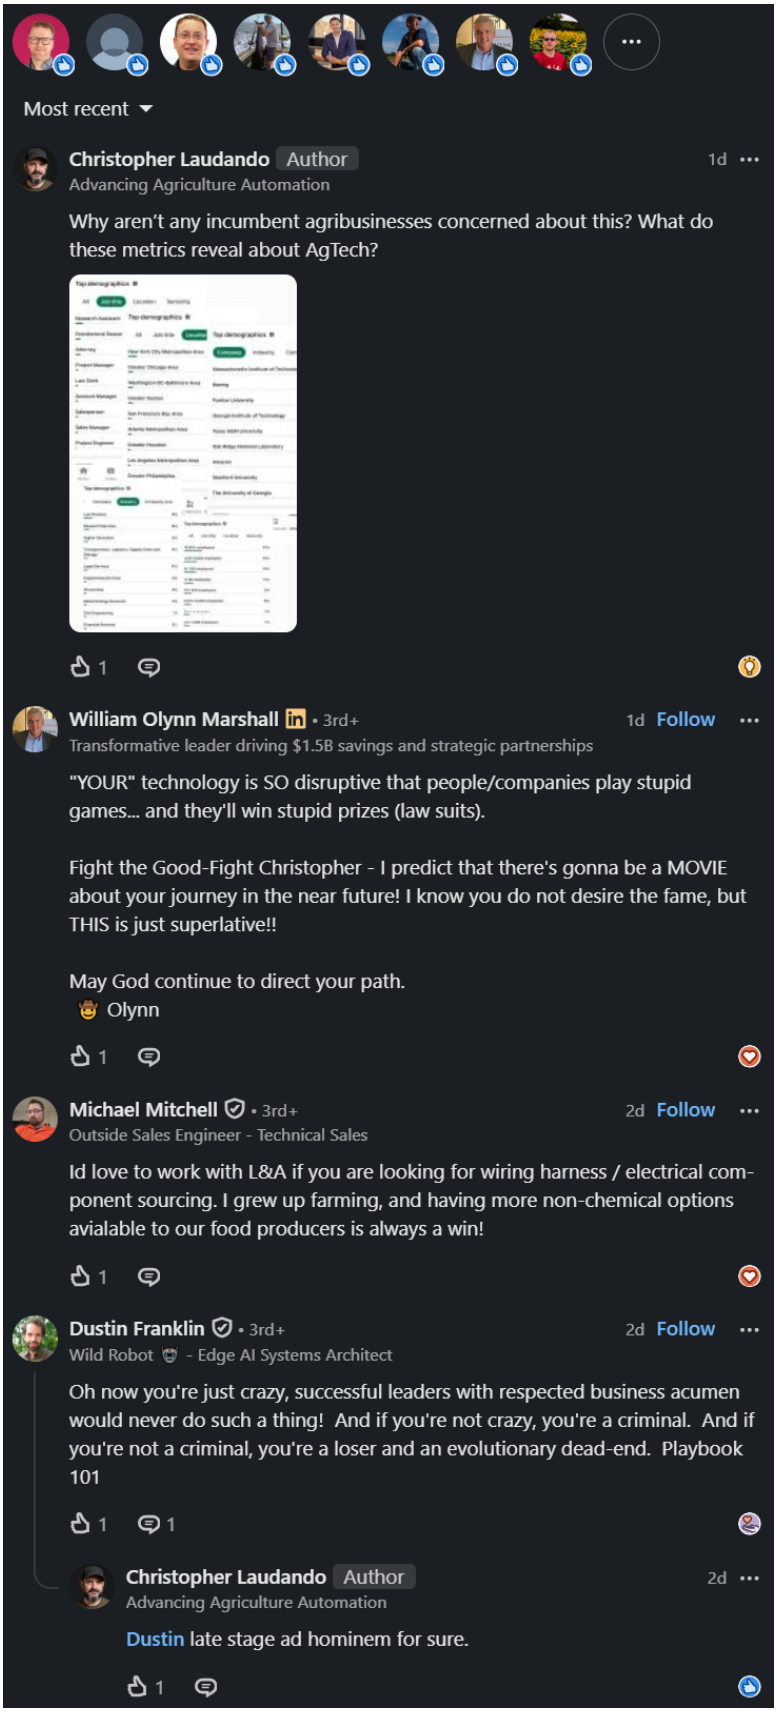

I can't speak to the motivations of the people responsible for spreading this misinformation, but I'm calling on Carbon Robotics and Tanimura & Antle to dispel these rumors through public statements of their own.

Farmers around the world want to see Carbon's "knockoff product" accusations adjudicated on the merits through U.S. federal courts, and I emplore farmers around the world to refer to the factual record related to my employment history, L&A's development timeline, and L&A's own patent portfolio...because it speaks for itself.

Harmful and wildly false claims regarding my background are just the tip of the iceberg; Australian lawyers are now also talking about *a personal vendetta against me*.

It's a shame the U.S. Department of Justice Antitrust & USDA MOU only polices competition in farm inputs and not personal vendettas! But no worries, mate. I tell people to stop overthinking it.

What's more likely? A monolithic and ruthless conspiracy to undermine Chris Laudando's life, liberty, and pursuit of happiness everywhere on Earth, or that Laudando & Associates LLC has bootstrapped the most important & transformational AgTech invention of our generation?

Ad hominem slander is late-stage desperation, not strategy. I could be objectively good, bad, or ugly - but it wouldn't do a damn thing to change the physics that rules over human hubris.

My technical credibility remains wholly intact and L&A's following is disproportionately engineering heavy for a reason. I didn't get permission from any Board of Directors or Wall Street; I simply revealed agriculture's inevitable future to the science, engineering, and technology decision makers at multinational OEMs & Crop Science companies, and now the cat is out of the bag.

If Chris Laudando continues to be foreclosed upon, the patented L&Aser will still provide a durable solution to herbicide resistance in row crops/broadacre.

If Chris Laudando suffers an unfortunate accident, the L&Aser will still provide farmers with "programmable" farming outcomes. All farmers, big & small.

If Chris Laudando is sued in 158 countries because NVIDIA pays to shuffle the deck on patent examiners until they've been granted overly broad claims for prior art in every single PCT member country, the L&Aser will still be the most efficient, lowest $/watt-$/acre, highest throughput photonic crop protection architecture in the world. For at least another 15 years.

And, because our L&Aser Dual Licensing v1.3 is crystal clear about the implications of further anti-competitive action against L&A, there is quite literally nothing that'll stop the L&Aser from helping all farmers - big & small - to reduce the inputs they can no longer afford.

To make farming profitable again.

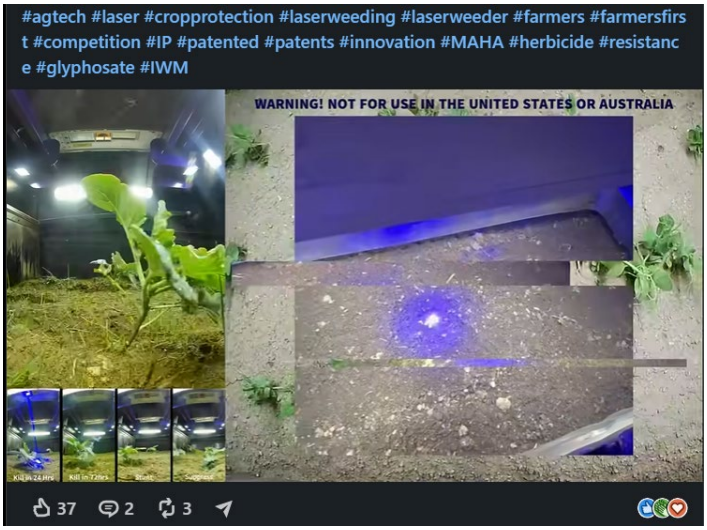

And to make America healthy again.

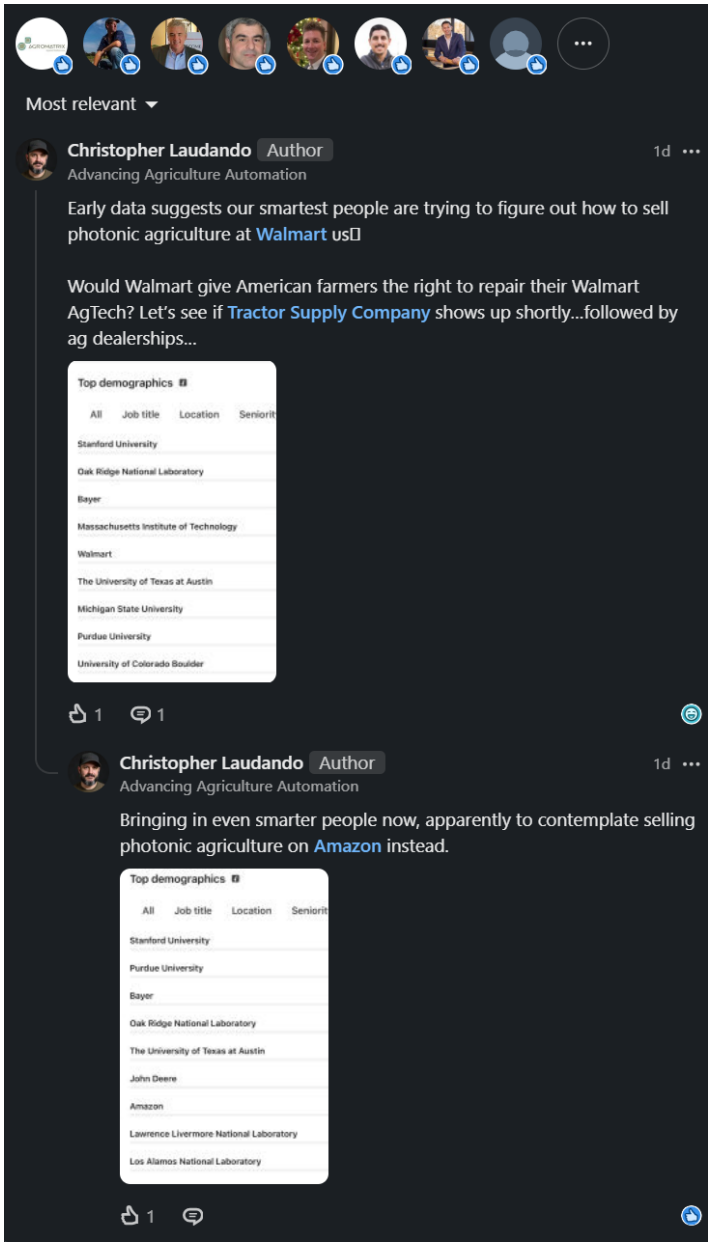

The only thing the [choose one: 'conspirators' or 'threatened'] can do now is delay the inevitable with the entire world watching.

The [choose one: 'conspirators' or 'threatened'] cannot stop it.

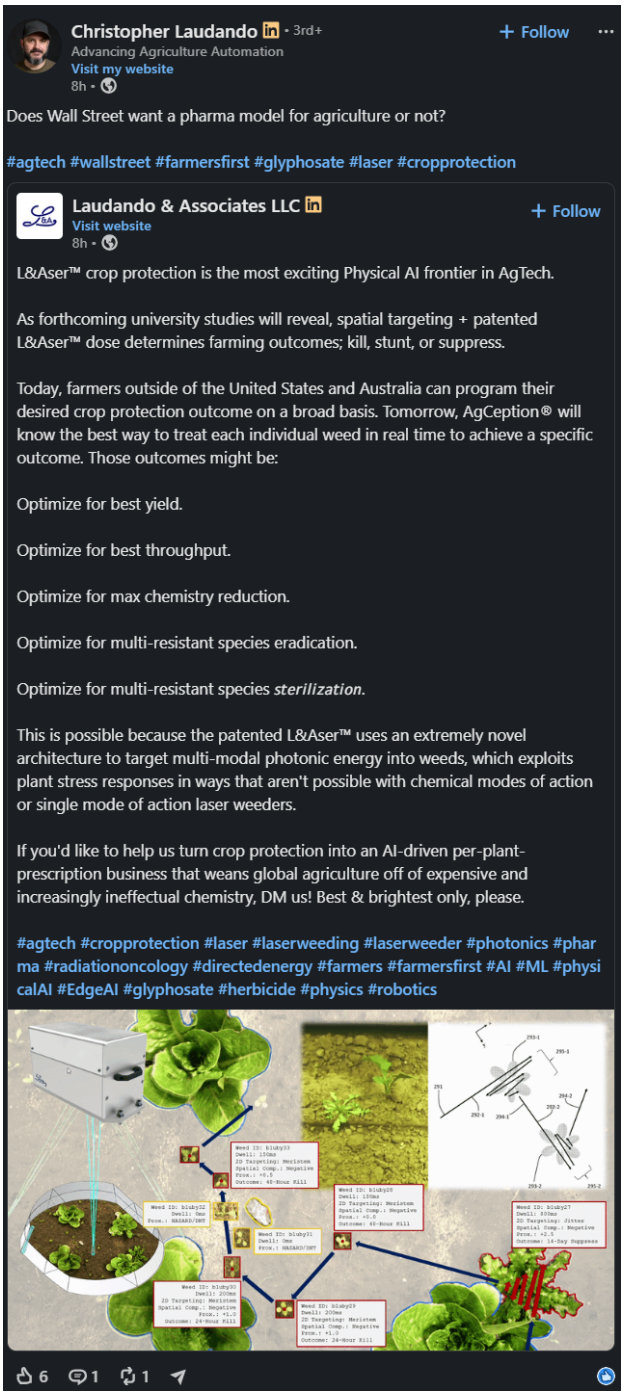

So why don't the [choose one: 'conspirators' or 'threatened'] collaborate with me instead?

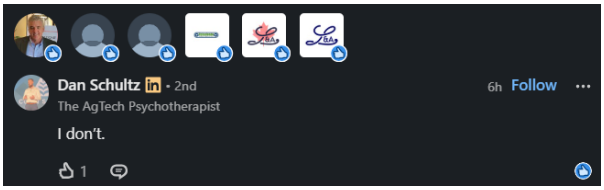

Why is that not an option for the [choose one: 'conspirators' or 'threatened']?

ANNEXURE G

UNDERTAKINGS & RELEASE AGREEMENT

In consideration of the releases provided below by Carbon Autonomous Robotic Systems Inc. (**Carbon**), Laudando & Associates LLC (**L&A**) by its servants, officers, employees, agents, assigns, successors, and associates (as that term is defined in the *Corporations Act 2001* (Cth)) undertakes to Carbon and its related entities, related bodies corporate, assigns and successors that L&A will:

1. Immediately cease and until 1 November 2042 desist from promoting, manufacturing, importing, offering for sale, supplying, using or otherwise exploiting, in Australia, the laser weeding system promoted under the name and trade mark "**L&Aser**", including the L&Aser System and the L&Aser Module as defined in the letter from Spruson & Ferguson Lawyers to L&A dated 9 July 2026 (collectively, the **Infringing Products**).
2. Immediately cease and thereafter desist, in Australia, from promoting, manufacturing, importing, offering for sale, supplying, using or otherwise exploiting any laser weeding system, module or product which exploits the invention the subject of any claim of certified Australian innovation patent no. 2026100003 entitled "Autonomous laser weed eradication" (**AU'003 Patent**) and/or Australian standard patent no. 2022380472 (**AU'472 Patent**) while those patents (as applicable) remain in force (noting the AU'003 Patent has an expiry date of 16 September 2028 and the AU'472 Patent has an expiry date of 1 November 2042).
3. Immediately withdraw L&A's opposition under section 59 of the *Patents Act 1990* (Cth) to Carbon's accepted Australian patent application no. 2025200151 (**AU'151 Patent Application**) and not challenge the validity or maintenance of the AU'003 Patent, the AU'472 Patent, the AU'151 Patent Application or any patent or application in Australia related to any of those patents or applications, including by applying to a court for revocation or rectification of the Register or by pursuing a substantive or procedural opposition of any kind, during the terms of such patents and patent applications.
4. Immediately cancel all existing orders placed with L&A for supply or use in Australia of the Infringing Products and provide refunds to all customers who placed those cancelled orders.
5. At the expense of L&A, take all steps necessary to:
   (a) immediately, in writing, in a form approved by Carbon, request the recall from all wholesalers, distributors, retailers and customers in Australia all Infringing Products which have been sold or distributed by or on behalf of L&A or their respective related entities, associates, servants or agents;
   (b) immediately provide to Spruson & Ferguson Lawyers Pty Ltd, as Australian lawyers for Carbon, copies of all letters of recall and notifications to the wholesalers, distributors, retailers and customers; and
   (c) within 14 days of the recalled products in item 5(a) above coming into L&A's possession, power or control, destroy the recalled Infringing Products, and all other Infringing Products otherwise in RR's possession, custody or control, and immediately provide proof of destruction to Spruson & Ferguson Lawyers Pty Ltd, as Australian lawyers for Carbon.
6. Within 21 days of signing this undertaking, provide to Spruson & Ferguson Lawyers Pty Ltd, as Australian lawyers for Carbon, a statutory declaration executed by the director of L&A that provides details and annexes documentary evidence to establish, with respect to Infringing Products imported into, stored, offered for sale, sold, supplied, used or otherwise exploited in Australia:
   (a) the name and address of each manufacturer and/or supplier from whom L&A has sourced or acquired the Infringing Products;
   (b) the total number of units of the Infringing Products which L&A has manufactured, imported, acquired or sourced;
   (c) the unit cost price or purchase price per unit of the Infringing Products sourced or acquired from each manufacturer and/or supplier;
   (d) the name, address, and details of any third parties, including retailers or distributors, to which L&A has sold or supplied the Infringing Products for re-sale in Australia;
   (e) the unit sale price of the Infringing Products sold or supplied by L&A in Australia;

(f) the total number of units of the Infringing Products sold or supplied by L&A in Australia as at the date of the letter to which this Agreement was proposed as Annexure G; and

(g) the number of units of the Infringing Products in L&A's possession, power or control, or the possession, power or control of L&A's and RR's employees, directors or agents, as at the date of the letter to which this Agreement was proposed as Annexure G.

In consideration of L&A providing the undertakings set out above, and subject to each of them continuing to comply with those undertakings, Carbon hereby releases L&A and its directors and employees from all liability for any infringement of the AU'003 Patent, the AU'472 Patent and any related patent or application in Australia that occurred prior to the date on which the last party executes this undertakings and release agreement.

L&A hereby acknowledges and accepts that Carbon and its affiliated companies may enforce and rely upon these undertakings, as a contractual promise for good consideration (including the releases given by Carbon above), in court proceedings with respect to any breach of these undertakings (including seeking specific performance, damages, an account of profits or injunction) in any Australian jurisdiction, including in any registry of the Federal Court of Australia, the Federal Circuit Court of Australia, or any District, County or Supreme Court of any Australian State or Territory.
