Corrections and Clarifications

AgCeption commercialization supplement | 6 November 2026

Christopher W. Laudando, President, Laudando & Associates LLC

Please associate this notice with L&A's 29 October 2026 submission in docket FTC-2026-1585 and the AgCeption commercialization supplement. The following corrections are incorporated in Revision 6, dated 6 November 2026, and supersede conflicting descriptions in the 5 November 2026 supplement. Existing event and paragraph identifiers remain unchanged.

C01 Ear-Height and Grain-o-Scope performance

The September-October 2025 Ear-Height faults were not Grain-o-Scope/Corn-o-Scope faults. Much of the Ear-Height difficulty arose from L&A inheriting Partner A's prior architecture. L&A recommended changes that were not adopted. L&A ultimately resolved the Ear-Height issues and fulfilled that contractual obligation. Separately, the Grain-o-Scopes had performed strongly for roughly three years. This is my clarification of the component, architecture and eventual outcome; the exact resolution date is unspecified. Separately dated installation and maintenance records retain their own context.

Affected references: Public P11 and P28; corresponding confidential narrative and source references.

C02 Attribution of both November 12 remarks

I identify the same senior executive of Partner A, identified in the confidential counterpart, as the speaker of both "I think you hurt your chances with Deere" and "Chris, John Deere is going to steal your technology." The earlier unresolved-speaker description is corrected. My later post places the account under November 12, 2025; the separately identified November 25 follow-up call remains distinct. This identifies the speaker of my reported conversations and does not establish his underlying source of knowledge or a direct statement from Deere.

Affected references: Public P29; original #81 and the corresponding confidential attribution records.

The consolidated supplement also removes editorial revision-introduction boilerplate. Original quotations and source images remain unchanged. References to historical unsigned proposals continue to describe the underlying records.
